

1. Convert the below list into numpy array then display the array Input: my_list = [1, 2, 3, 4, 5]

```
import numpy as np
my_list = [1, 2, 3, 4, 5]
my_array = np.array(my_list)
print("Numpy Array:")
print(my_array)
```

2. Convert the below list into a numpy array then display the array then display the first and last index and then multiply each element by 2 and display the result. Input: my_list = [1, 2, 3, 4, 5]

```
my_array2 = np.array(my_list)
first_index = my_array2[0]
last_index = my_array2[-1]

print("\n Numpy Array:")
print(my_array2)

print("\nFirst index:", first_index)
print("Last index:", last_index)

# Multiply each element by 2
result_array = my_array2 * 2
print("\nArray after multiplying by 2:")
print(result_array)
```
